PROJECTS

Zara-Clone
HTML,CSS and Javascript

- I have built a frontend web app that replicates the design and functionality of the Zara website. This project uses HTML, CSS, JavaScript, and React to create a responsive and user-friendly interface, showcasing product collections, categories, and seamless navigation. To enhance the web design and user appeal, I have added a parallax effect. In the future, I plan to integrate backend functionality to enhance user interaction with features like viewing orders, available offers, order placement, live status tracking, and sending emails or other contact services to notify users about upcoming and ongoing sales and discounts.

Hotel-Website
**HTML,CSS , Javascript,React.js,Express.js**

I have build a full stack web app of hotel .This project uses HTML,CSS,Javasript,React.js ,Express.js. . The web application features user authentication, dynamic route handling, and role-based access control. Key functionalities include exploring hotels, booking management, user profile updates, and payment processing. The project integrates GraphQL APIs to provide seamless communication with the backend, ensuring efficient data fetching and state updates. It also incorporates responsive design principles for a user-friendly experience across devices.
